Amendments To The Claims

Listing of Claims

This listing of claims replaces all prior versions, and listings, of claims.

1. (Previously presented). A method for monitoring a manufacturing process comprising:

performing an analysis by using values of at least one process parameter of the

manufacturing process of a plurality of physical objects;

determining one physical object from the plurality of physical objects which best

characterizes the plurality of physical objects, based on the analysis of the at least one process

parameter; and

selecting the one physical object which best characterizes the plurality of physical

objects, for monitoring the manufacturing process.

2. (Original). The method as claimed in claim 1, in which the physical object is a wafer.

3. (Original). The method as claimed in claim 1 or 2, in which the analysis is a statistical

analysis.

4. (Original). The method as claimed in one of claims 1 to 3, in which the values of the at

least one process parameter are measured when the physical object is being manufactured.

Appl. No.: 10/706,612

Amendment. Dated September 25, 2006

Reply to Office Action Dated July 25, 2006

5. (Previously presented). The method as claimed in one of claims 1 to 4, in which the

physical object selected is subjected to a quality checking measurement for checking the quality

of the respective physical object.

6. (Previously presented). The method as claimed in claim 5, in which, for ascertaining the

variation of the qualities of the physical objects, a physical object for which the value of the at

least one process parameter has a prescribed difference from the physical object selected is

additionally subjected to a quality checking measurement.

7. (Original). The method as claimed in claim 1 or 6, in which the statistical analysis

comprises the ascertainment of the median of the values of the at least one process parameter.

8. (Original). The method as claimed in claim 1 or 7, in which the statistical analysis

comprises the ascertainment of the arithmetic mean value of the values of the at least one process

parameter.

9. (Withdrawn). A device for the monitoring of a manufacturing process of a plurality of

physical objects with a processor which is set up in such a way that the following method steps

can be carried out:

performance of an analysis by using values of at least one process parameter of the

manufacturing process of the physical object;

marking of physical objects when, as a result of the analysis, a prescribed selection

criterion is satisfied, so that the associated physical objects can be taken as a random sample.

3 of 7

Appl. No.: 10/706,612

Amendment. Dated September 25, 2006 Reply to Office Action Dated July 25, 2006

10. (Withdrawn). A computer-readable storage medium, in which a program for the monitoring of a manufacturing process of a plurality of physical objects is stored, which program has the following method steps when it is run by a processor:

performance of an analysis by using values of at least one process parameter of the manufacturing process of the physical object;

marking of physical objects when, as a result of the analysis, a prescribed selection criterion is satisfied, so that the associated physical objects can be taken as a random sample.

11. (Withdrawn). A computer program element for the monitoring of a manufacturing process of a plurality of physical objects, which has the following method steps when it is run by a processor:

performance of an analysis by using values of at least one process parameter of the manufacturing process of the physical object;

marking of physical objects when, as a result of the analysis, a prescribed selection criterion is satisfied, so that the associated physical objects can be taken as a random sample.
